

Evidence-led production report

PUBLISHED	2026-08-06	POLICY V4
-----------	------------	-----------

Published page

/ai-roleplay-first-message - AI Roleplay First Message: Start With a Scene, Not a Script. The local publication passed the separate codex_editor review after automated quality gates.

Portfolio window and readiness

Window	2026-07-05 to 2026-08-02
Coverage	7 of 7 published pages collected; 0 unavailable.
Readiness	Attribution join checked; not blocked. The signed NovelAI callback handshake is unavailable, so full revenue-loop readiness is not claimed.
Trend signal	Official Google Trends UI unavailable; no relative-interest value or direction inferred.

Observed page leaderboard

Sorted by observed landing UV. Search Console figures are exact-page aggregates for the common finalized window; all values below are safe, non-user-level data.

Source page	Landing UV	Qualified outbound	GSC clicks / impressions	URL Inspection
ai voice roleplay story	9	0	0 / 0	Discovered - currently not indexed
interactive voice story	5	0	0 / 0	Discovered - currently not indexed
choose a role ai story	4	1	0 / 0	Discovered - currently not indexed
story based ai roleplay	4	0	0 / 0	Discovered - currently not indexed
ai roleplay prompt vs existing story	1	0	0 / 0	Submitted and indexed
how to start ai roleplay	1	1	0 / 0	Discovered - currently not indexed
how to choose an ai roleplay app	0	0	0 / 0	Discovered - currently not indexed

Why this page was selected

Intent	AI roleplay first message - a distinct post-selection task.
Policy score	73 / 100; create_page. Product fit 80, trial intent 85, revenue intent 55, specificity 100.
Evidence	6 accessible public records across 6 domains; the selected candidate cites three directly supporting, independent sources.
Editorial boundary	Only approved product facts. No third-party IP, price, availability, privacy, safety, latency, voice-technology, real-time, or multiplayer claim.

Draft and review gates

The English draft has 876 words, five body sections, three FAQs, a real attributed CTA, contextual first-party links, and a server-rendered First-Reply Flight Plan. codex_editor approved search intent, product truth, conversion path, and source accuracy. The pending design guidance was adopted as a retro-futuristic task-guide treatment with a starting/playing pain point, distinct from the preceding comparison page.

Candidate fallback record

Seven other distinct jobs were evaluated: scene recovery, staying in character, pacing, dialogue versus action, character motivation, choice consequences, and beginner first-scene preparation. The first candidate passed all hard gates, so no fallback publication was required. The broad beginner first-scene candidate was marked same-intent against the existing start guide and not selected.

Release status

Local publishing and full verification passed. Remote push, Vercel production readiness, live rendered-page acceptance, sitemap production verification, indexing confirmation, and backlink activity are not yet claimed in this report.

Sources retained in the research report: RPDATE, evenfall, Anione, AI Dungeon Help Center, HeyWaii, and Keoria. Public sources informed searcher intent only; approved project facts remain the sole product-claim source.
