

Daily SEO Content Growth

01 August 2026 | Shanghai day | evidence-led production and morning release report

Production decision	Published
Candidates reviewed	8
Evidence domains	8
Draft depth	940 words

Release outcome

/ai-roleplay-prompt-vs-existing-story was published after builder gates and an identified **codex_editor** approval. Its single H1 is "AI Roleplay Prompt vs Existing Story". The page is a format-choice decision: use a custom prompt to author a premise, or use an existing story to enter a situation already in motion with an available role.

Required gates

Gate	Observed state	Decision
Feedback intake	feedback:sync completed; no unconsumed entries	Pass
Protected data	Search Console, URL Inspection, landing UV and attribution store observed	Pass
Attribution join	Checked and not blocked	Pass
Full revenue loop	Signed NovelAI callback handshake unavailable	Not ready; not expansion gate
Editorial review	Search intent, product truth, conversion path and source accuracy approved	Pass

Portfolio snapshot

Source page	Landing UV	Qualified outbound	GSC clicks / impressions	URL Inspection
/ai-voice-roleplay-story	3	0	0 / 0	NEUTRAL: URL is unknown to Google
/choose-a-role-ai-story	2	0	0 / 0	NEUTRAL: URL is unknown to Google
/how-to-start-ai-roleplay	0	0	0 / 0	NEUTRAL: URL is unknown to Google
/interactive-voice-story	4	0	0 / 0	NEUTRAL: URL is unknown to Google
/story-based-ai-roleplay	2	0	0 / 0	NEUTRAL: URL is unknown to Google

Research and editorial record

The report preserves decision evidence while excluding click IDs, downstream event counts, payment data, revenue, currency, and user-level records.

Selected opportunity

Policy signal	Derived value
Overall create-page score	78
Product fit	80
Trial intent	100
Revenue intent	55
Intent specificity	100
Originality	90
IP risk	0
Cannibalization risk	10

The next scoring candidate was an AI roleplay app comparison (77), but it was not selected because a trustworthy comparison would require current, independently verified market claims beyond this product-fact boundary.

Evidence and content boundaries

Eight public evidence records from eight independent domains were evaluated. The selected decision cites public prompt, scenario, and interactive-fiction sources only to establish the searcher task. Product statements remain constrained to the approved story-led voice roleplay, existing plot, available role selection, and interactive-fiction-history facts.

The released draft contains five body sections, three FAQs, a primary attributed NovelAI CTA, and two contextual first-party links. It makes no claim about pricing, platform availability, privacy, latency, safety, multiplayer, technical voice behavior, or any third-party intellectual property.

Release verification and next actions

Local verification passed: 37 automated tests, experience contracts, TypeScript, production build, and rendered-page checks for six SEO pages including H1, canonical, Article and FAQ structured data, attributed CTA, cross-links, robots, and sitemap.

Deployment and indexing are not yet claimed in this report. Before a production claim, safely push the scoped daily artifacts, wait for Vercel READY, then independently check the production H1, canonical, /go/novelai/ CTA, JSON-LD, robots, sitemap, and runtime errors. Google currently reports all earlier exact URLs as unknown; no indexing request outcome is inferred. No backlink outreach was performed.
